The object at A, seen by the eye at P, without any mirror, would appear in the direction PA. But after reflexion from the two mirrors, the light comes to the eye in the direction DP, and the apparent place of the object is changed from A to R. Cor. 2. If the two mirrors be parallel, they will make no alteration in the apparent place of the object. 93. The principal parts of Hadley s Quadrant are the following; 1. A graduated arc AB (Fig. 17.) connected with the radii AC and BC. 2. An index CD, one end of which is fixed at the centre C, while the other end moves over the graduated arc. 3. A plane mirror called the index glass, attached to the index at C. Its plane passes through the centre of motion C, and is perpendicular to the plane of the instrument; that is, to the plane which passes through the graduated arc, and its centre C. 4. Two other plane mirrors at E and M, called horizon glasses. Each of these is also perpendicular to the plane of the instrument. The one at E, called the fore horizon glass, is placed parallel to the index glass when the index is at 0. The other, called the back horizon glass, is perpendicular to the first and to the index at 0. This is only used occasionally, when circumstances render it difficult to take a good observation with the...
