However, a difficulty associated with these, and most styles of qualitative theory development, is conveying credibility. Inductive System Diagrams combine aspects of Grounded Theory methods and System Dynamics to generate theory with verifiable data, explicit inferences and testable predictions. Grounded theory approaches are used to develop the variables which have a great deal of explanatory power and are intimately tied to the data. The cause and effect relationships among these variables are then shown using causal-loop diagramming techniques from System Dynamics. This combination of grounded theory and causal-loop diagramming allows researchers to generate and communicate empirically based theories.
